

Class Assignment 3: Social Engineering and Web application attacks

Part 1: Demonstrate a Social Engineering Tool which allows the attackers to create a clone of website and captures the confidential information of the clients.

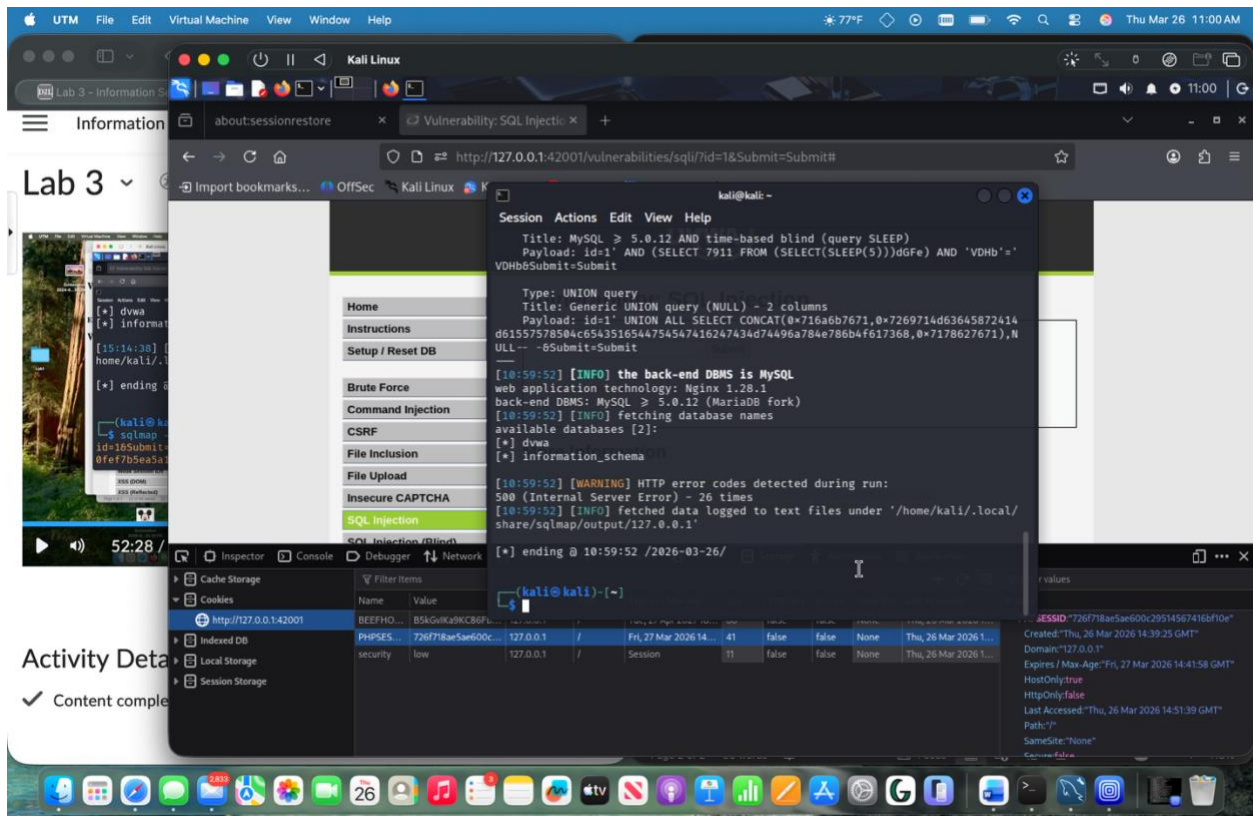

Part 2: Phishing Page

Design a Phishing page, which allows the attackers to create a hook/inject the malicious script to victim's Browsers.

Part 3: Perform vulnerability assessment of the following website and demonstrate SQL injection attack and paste the database! (Please use DVWA only)

Recommendations to avoid the SQL injection attacks and avoid Social Engineering (At least 5 Recommendations with your Reasons)
